

Q4

What was your assigned major?

Q5

How would you rate your experience with your major?

Q6

Please share any comments about why you chose the rating above.

Biotechnology

Very good

The lady conducting the session was very well organized, enthusiastic, and had experiments suitable to our group. The male teacher was also enthusiastic and well-prepared. He was especially good in answering impromptu questions. Our group was late in arriving at the afternoon session—we arrived around 2:15. The activities were timed to be completed by 5:00. The lady said she would stay later to finalize everyone's everyone's experiment. How commendable! Instructors like her make a great difference! Please thank and share this with her.

Biotechnology

Very good

Did not feel that the MIA related to the Grandchildren as it should, although it was interesting to the Grandparents.

Biotechnology

Very good

Liz (the main instructor) was excellentâ€”well organized, good hands-on activities and knew how to engage all age levels. One suggestion would be to hand out â€œinstructionsâ€ for the next days' lab work the day before so people have more time to digest and feel less rushed in the lab. My only somewhat negative comment is that the session about Missing In Action, while good, seemed much more aimed at the Grandparents and not the grandchildren.

The session leaders were very engaging for both kiddos and adults. Please thank them for us!
